PART 01

Ang Relay (4 at 5 Pin)

Ang relay ay switch na pinapatakbo ng maliit na kuryente para mag-on ng malaking kuryente. **Dalawang circuit sa loob ng isang relay:** ang *control* (coil) at ang *load* (contacts).

Mga hakbang

1. **Pakinggan.** I-on ang control (halimbawa, ang switch). Kapag may "click," gumagana ang coil.
2. **Coil test.** Sukatin ang resistance sa pagitan ng 85 at 86 (relay na tanggal sa socket). Walang reading o sobrang laki = sirang coil.
3. **Contacts test.** Sukatin ang 30 papunta sa 87: dapat bukas (walang continuity) kapag walang power, at sarado kapag may 12 V sa coil.
4. **Socket test.** Sa socket, tingnan kung may 12 V sa pin 30 at 85 (o 86), at ground sa kabilang coil pin.
5. **Swap test.** Palitan ng kaparehong relay na alam mong maayos. Kapag gumana, ang relay ang sira.

Mag-ingat: iba-iba ang pin layout ng ibang relay. Tingnan ang numero sa katawan ng relay at ang wiring diagram.
